Project Vision - Student Timetable Management System

Students struggle with keeping track of all their classes and assignments, which can result in them arriving or delivering them late, respectively. Existing solutions are lackluster, as they fail to address their needs due to lack of features or customization, which leads to frustration and inefficiency.

Our program is designed for high school and university students, who need a centralized, intuitive and customizable management solution for organizing their schedule. The purpose of such a solution originates from the students' needs to track classes, assignments and maintain their workload in an efficient, dynamic and simple manner.

Our product offers students the possibility to see their upcoming classes and the assignments which they need to complete. All of the information is displayed in an interactive and pleasant way with multiple options to allow students to customize their experience. This solution provides them with a more centralized application to manage their schedules and with multiple opportunities to customize their experience, surpassing existing solutions.

Key Features and Functionality:

- Calendar and time table to see classes and assignments.
- User registration and login to allow students to see their specific schedules.
- Customization options for improved user experience.
- Alerts for upcoming classes and assignments.

Goals and Objectives:

- Increase user adoption rates by 50% within a four month timeframe.
- Improve user satisfaction scores to 70% or above within a four month timeframe.
- Establish partnerships with 3 educational institutions in two years.

Our vision is to empower students with a smart and intuitive scheduling system that simplifies class management. We aim to enhance student productivity and academic organization, ensuring that they stay on top of their schedules and deadlines effortlessly.
