No	Heuristic	Description of the issue	Severity	Suggested Improvements
1	H1-1: Simple & natural dialog	- Some actions require previous actions to be done, but these are not clearly stated. - The application never states that subjects are only visible if the user is part of a group with that subject, leading to confusion and frustration.	3	- Make it easier for the user to follow a clear path while avoiding redundancies. - Make the application more clear and obvious to use, specially for new users.
2	H1-2: Speaks the users' language	No issues	0	*Suggested Improvements*
3	H1-3: Minimize users' memory load	- The forms which require user input don't save user data if the user exits. - There are no inline hints for data criteria such as password criteria.	2	- Save user data temporarily even if they have not completed the form submission. - Add popup text field that would tell the user the criteria for different fields in the form.
4	H1-4: Consistency	- The notification text is inconsistent with the rest of the application and is hard to read. - Some elements of the application are missing translations or improperly translated.	2	- Change the styling in the notifications to be more aligned with other parts of the app. - Add the missing translations and update the code to properly display them.
5	H1-5: Feedback	- Some actions that require submission of data don't offer direct feedback after they succeed.	1	- Include more explicit feedback through alerts, notifications or popups.
6	H1-6: Clearly marked exit	No issues	0	*Suggested Improvements*
7	H1-7: Shortcuts	- No shortcuts exist.	2	- Include shortcuts for navigating the pages and interacting with the buttons.
8	H1-8: Precise & constructive error messages	- When registering without a date of birth, a technical error is thrown. - Sometimes when registering, the generic error "Invalid user data" is shown. - When logging in, if the user inputs the wrong password, the error message that is displayed only says that an unexpected error occured. - When creating an event, if the time of the event is incomplete, an Exception is thrown with no error message in the GUI.	4	- Make the error messages clearer, more explicit and not technical.
9	H1-9: Prevent errors	- The social security number is limited to 11 characters, but the text field allows for more characters.	1	- Limit the number of characters in the social security number field to 11.
10	H1-10: Help & documentation	- Some buttons or options lack a clear meaning of what they are used for. - There is no tutorial for the application, so some steps of creating events can be confusing and frustrating to figure out.	3	- Add descriptions or some labels to buttons and options. - Add a tutorial of some kind of documentation.
